

1)  $h[n]$ 的  $z$  变换

代码:

```
1. % 生成  $h[n]$ 
2. numCoeffs = 40;
3. h = rcosdesign(1, 2, numCoeffs, 'sqrt');
4.
5. % 1)  $h[n]$ 的  $z$  变换
6. syms z n;
7. Hz = ztrans(h, n, z);
```

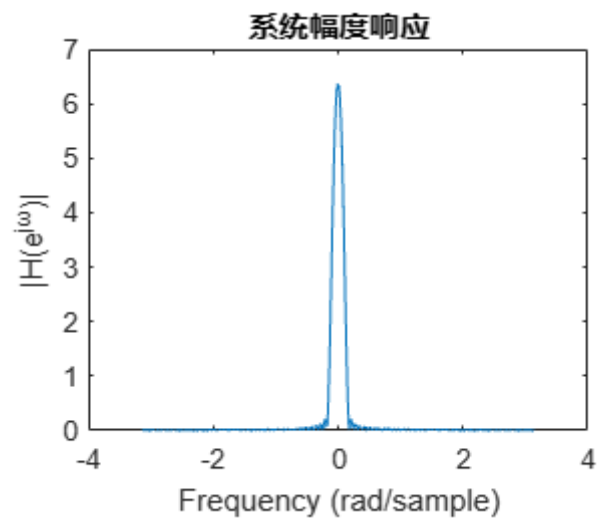

2) 求出系统零点 ( `pzmap`), 并画出系统零极点图

代码:

```
1. figure;
2. subplot(2, 2, 1);
3. %pzmap(h);
4. zplane(h, 1); % 使用 zplane 函数画出零点图
```

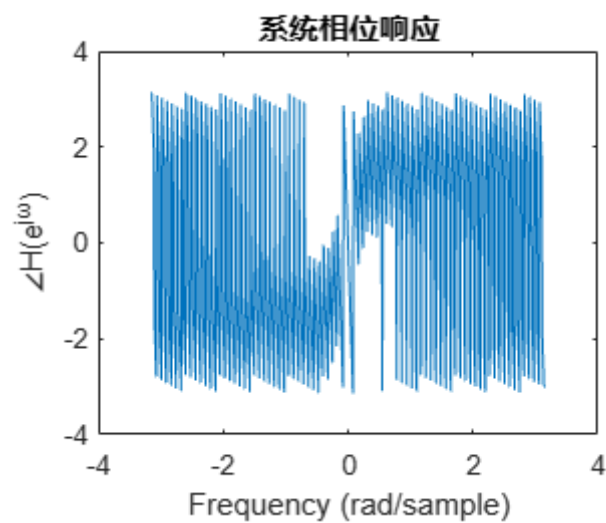

3) 画出系统幅度响应  $|H(e^{j\omega})|$

代码:

```
1. omega = -pi:0.01:pi;  
2. H = freqz(h, 1, omega);  
3. subplot(2, 2, 2);  
4. plot(omega, abs(H));  
5. title('系统幅度响应');  
6. xlabel('Frequency (rad/sample)');  
7. ylabel('|H(e^{j\omega})|');
```

3) 画出系统相位响应  $\angle H(e^{j\omega})$

代码:

```
1. subplot(2, 2, 3);
2. plot(omega, angle(H));
3. title('系统相位响应');
4. xlabel('Frequency (rad/sample)');
5. ylabel('∠H(e^{j\omega})');
```

4) 画出系统群延迟  $\text{grd}[H(e^{j\omega})]$

代码:

```
1. subplot(2, 2, 4);
2. grpdelay(h);
3. title('群延迟');
```
